Summary

Senior Full Stack Software Engineer with 5+ years of experience designing, building, and scaling cloud-native applications on AWS. Proven track record leading engineering teams, architecting serverless backend systems (API Gateway, Lambda, RDS, CloudFormation), and building multi-agent AI systems using Model Context Protocol (MCP). Skilled in leveraging AI-assisted development tools (Claude, GitHub Copilot) to accelerate delivery, and experienced in CI/CD automation (Jenkins, GitLab, AWS CodePipeline), RESTful and GraphQL API design, and mentoring engineering teams in distributed agile environments.

Technical Skills

Backend & APIs: Java 11+ (Spring Boot), Node.js (Express/NestJS), RESTful APIs, GraphQL, Microservices
Frontend: React (Hooks, Context API), Angular 2, State Management (Redux, Zustand), UI Components
Cloud (AWS): EC2, S3, Lambda (Multi-Region), DynamoDB, RDS, Aurora MySQL, CloudFormation, API Gateway, Serverless Computing
Messaging & Caching: SQS, SNS, Redis / ElastiCache
DevOps & CI/CD: Jenkins, GitLab, AWS CodePipeline, Terraform, Docker, Kubernetes, Catchpoint, Dynatrace, Splunk, CloudWatch, CloudTrail
AI/ML: Amazon SageMaker, Amazon Bedrock, AI-Assisted Development (Claude, GitHub Copilot), Multi-Agent Orchestration, Model Context Protocol (MCP), LLMs, RAG, Vector DBs, Prompt Engineering
Architecture: System Design, Microservices, Data Modeling, Auth (OAuth, JWT, SSO), Cloud Security & Networking
Process: Agile/Scrum, Distributed Agile Teams, Cross-Functional Collaboration, Mentoring

Experience

Senior Software Engineer Mar 2026 - Present
Freshworks, Chennai, India

- Accomplished a 70% reduction in debugging and development time, as measured by developer cycle time, by integrating Claude and GitHub Copilot into daily development workflows for code review, bug detection, and feature implementation.
- Accomplished resolution of 80% of incoming support queries without human escalation, as measured by query deflection rate, by architecting a multi-agent, read-only L2 diagnostic system for Freshservice that analyzes support tickets, attachments, related incidents, and product data using secure Model Context Protocol (MCP) integrations for evidence-first root cause identification.
- Strengthened diagnostic reliability and support-team adoption by designing feedback-driven self-improvement into the system's reasoning loop, enforcing strict no-write guardrails, and generating concise, role-specific reports for support and engineering teams.
- Contribute to the Freshservice backend leveraging Redis for caching and MySQL for relational data storage, using CloudWatch, CloudTrail, and Haystack for debugging, tracing, and observability.

Senior Software Engineer Mar 2021 - Feb 2026
Presidio, Chennai, India

- Led a team of 3 engineers to architect and deliver a serverless backend chatbot application for a client project, owning end-to-end infrastructure across API Gateway, AWS Lambda, DynamoDB, and RDS, provisioned via CloudFormation and Terraform with S3 for data storage.
- Extended the chatbot backend to a multi-region architecture using AWS Lambda, with SQS and SNS enabling asynchronous, event-driven communication between services for improved resilience and scalability.
- Owned cloud security and networking configuration for the backend infrastructure, applying access control and security best practices across the AWS environment to safeguard production systems.
- Built Splunk dashboards and threshold-based email alerts to monitor production system failures, enabling the team to detect breaches and respond to incidents quickly.

- Accomplished a 40% reduction in release cycle time, as measured by deployment frequency, by building and maintaining CI/CD pipelines across Jenkins, GitLab, and AWS CodePipeline over 4 years.
- Accomplished a 50% improvement in platform scalability, as measured by system load handling, by migrating an NLP chatbot platform to a modernized architecture.
- Accomplished consistent on-time sprint delivery, as measured by sprint completion rate, by owning requirements gathering and sprint planning as team lead while mentoring junior engineers on development best practices.

Software Engineer Intern Feb 2020 - Jul 2020
Zoho, Chennai, India

- Accomplished a 20% reduction in feature development time, as measured by component reuse across the codebase, by developing 10+ reusable, responsive front-end UI components in React.

Education

Jeppiaar SRR Engineering College Dec 2020
B.E. in Computer Science

Certifications

AWS Certified Solutions Architect – Associate

AWS Certified Generative AI Developer – Professional

Google Cloud Certified Associate Cloud Engineer

Microsoft Certified: Azure AI Engineer Associate

Awards

Spot Award (Presidio), 2x: Recognized for excellence in leading the engineering team and delivering the project.

Above & Beyond Award (Presidio): Recognized for leading the migration of the chatbot application from IBM Watson to Rasa.

Publications

"Deploying Rasa with Efficiency" – An engineering guide on deploying NLP platforms via Helm Charts.
